

"Trumpery flummery" 'R' us.

"Rana could have done it. Yes."

Too late to turn back now.

Dear Professor Weiss,

Have you strived in vain to convince yourself of being entirely satisfied with the flakey NEW LIGHT vs. OLD LIGHT "explanation" for that pesky RUBBER RULER PUZZLE?

Has the smoke-and-mirrors GLITCH that prevented LIGO from INITIATING the flurry of observations of GRB 170817A ever caused you to yearn for even more convincing evidence of G-Waves?

Perhaps what gravitational physics really needs is a good dose of humility—to reconsider a simple experiment proposed by Galileo in 1632, which has not yet been done. What we really need is to build and operate humanity's very first SMALL LOW-ENERGY NON-COLLIDER.

Sincerely,

Richard Benish
